PROJECTS

Title	Year	Details
Traffic Rules Notification System	2025	This project proposes a system where traffic rules are stored in a cloud-based MySQL database, accessible via a web application. Users are provided with a mobile application that tracks their location in real-time and notifies them about relevant traffic rules through voice alerts. The system integrates GPS for location tracking, cloud storage for centralized rule management, and a user-friendly interface for both mobile and web applications. This project aims to provide a scalable, efficient, and automated solution to improve road safety and rule compliance.
